

Neighborhood sidewalk program update

1-9-2025

(This dashboard is an interactive tool created by our Geospatial Application Services Manager, to filter/navigate the raw data ICC/IMS provided. This allows us to track and plan sidewalk defects as part of the neighborhood sidewalk repair program.)

The engineering department has begun meeting with AECOM to develop a district-based neighborhood sidewalk repair program. This multi-year program will resolve the identified sidewalk repairs within the City and allow us to create an ongoing maintenance schedule. Using the data collected from the sidewalk survey, our plan is to address the most severe rated sidewalk issues (deflections $\geq 2"$) and then to expand into the districts completing all identified repairs needed before moving onto the next district. Simultaneously we will retain our as-needed repairs for any sidewalk deficiencies that match the historical prerequisite of a deflection greater than 2" that may be located outside of the current district being worked on as part of the neighborhood sidewalk program.
